PRICING

At Austplant Native Plant Nursery, we cultivate and grow many of our own plants to offer our customers a broad range of beautiful natives at competitive prices. Ask us about our bulk purchase discounts and take advantage of our generous specials.

POT SIZES

We stock a variety of pot sizes to suit your gardening needs including 15cm deep forestry tubes, available from April—November for screen and windbreak plants; 15cm potted garden varieties including hardy ground covers; small and large shrubs and windbreak plants. We also stock 20cm and 25cm advanced shrubs and trees.

SERVICES AVAILABLE

Our experienced staff provide first hand, expert advice, and are happy to provide planting and garden design assistance. For a reasonable charge, our onsite design consultation is available.

We aim to help you achieve the best results to meet your native plant needs. All our staff are fully qualified in horticulture and can provide expert advice on creating windbreaks, garden design and planting, soil testing, planting and assistance with the design of domestic, farm, industrial and commercial gardens. We can also help devise solutions for problem areas such as alkaline (lime) soils commonly found from Rye to Portsea and parts of Cape Schanck. We can also provide strategies for windswept and salty areas and, permanently wet, shady or extremely dry areas. Please feel free to ask us for suggestions to get the right plants for your property.

Put your personality into your garden, as you would with your home. Look to create atmosphere through consideration of elements such as colour, fragrance, shape and texture. A carefully considered garden will bring much pleasure and will attract birds to help control insects. Your creation will encourage you to better utilise outdoor areas, allowing you to smell the bush and wonder at our beautiful and unique native flora.

PLANT VARIATIES

If you require a particular plant not listed in this catalogue, please ask as we are always introducing new lines as they become available. Please note that all plants listed are under propagation but not all plants may be available at all times of the year.

Austplant Nursery was established with the aim of encouraging the planting and propagation of native plant species and in particular, to encourage awareness of the need to replenish farms and gardens with indigenous species so that our species will not be lost forever, ensuring that bird and animal life have a secure habitat. Many local species are grown for this reason and it gives us a great thrill when clients who planted many Eucalyptus Viminalis several years ago, returned to tell us they are now colonised by koalas and bird life. Most plants listed are adaptable and highly suited to the Mornington Peninsula. However, some require specialized positions.

MAINTENANCE AND TIPS

Watering: A weekly soaking during hot weather is far better than a daily light sprinkling which would encourage surface rooting and a reliance on regular watering. For dry soil, newly planted plants should be watered daily to encourage a deep root system.

Handy hint: Consider using a soaker hose with a timer for soaking once a week for the first Summer of planting rather than fixed irrigation which is costly and can become redundant as the plants mature.

Fertilizer: Most plants benefit from a light application of a slow release fertilizer once a year. We have found that Osmocote Native Fertilizer or Organic Blood and Bone are ideal. It is important where a mulch of any kind is used to re-feed your plants with a surface application for the first two years.

Pruning: Tip prune most shrubs by pinching out the growth tips at least once a year for the first two years. This can be done at any time and will encourage a bushy habit and lots more flowers. All 'daisy' plants need a hair-cut after flowering to prolong life and keep a vigorous habit.

Handy hint: Tip prune most of your shrubs as they grow. It enhances bushiness and many more flowers.

Pest control: A native garden will attract native birds which will do much to control pests. If sprays must be used, be aware of their toxicity and residual effects on both humans and wildlife. White oil will safely control scale and sooty mould and a Eucalyptus Pyrethrum based spray will usually keep most other insects at bay.

CATALOGUE CODES

- Plants suitable for alkaline (lime) soils, as can be found in Rye, Blairgowrie, Sorrento, Portsea and Cape Schanck.
 - Plants with degrees of salt tolerance for foreshore areas.
 - W Winter flowering plants
 - Sp Spring flowering plants
 - Su Summer flowering plants
 - Au Autumn flowering plants
 - IND Indigenous to Mornington Peninsula
- h x w Height x width

PLANTING PROCEDURE

In a small garden where watering can be carried out with ease, planting can commence any time, avoiding hot days in Summer. Large scale plantings are best carried out in Spring, Autumn and early Winter, when natural rainfall occurs.

1. Dig around and break up the soil to spade depth. Dainage and friability of clay soils will benefit greatly with the working in of Gypsum. Dig hole 1/4 metre square and deep enough for the plant.
2. Fill the hole with water and allow to drain, adding one teaspoon of Osmocote Native Fertiliser or a heaped handful of Organic Blood and Bone in the base of the hole.
3. Soak plant thoroughly and slide container from plant, taking care **not to disturb roots** except in case of *melaleucas* and *callistemons*. It is far better to cultivate for 1/4 a square metre planting area and to graduate the soil back into the hole while you are planting rather than tease the roots or wash away the original soil of native plants. This encourages faster root development.
4. Place plant in the hole and fill in soil, breaking up lumps as you go.
5. Firm soil and carefully soak the area again with water. The soil coverage should not exceed the level of the soil of the potted plant.
6. Stake only if necessary with a tie on stake and loose loop around the plant. Avoid close cultivation near root system.

Handy hint: Avoid straight lines with paths and garden beds. Instead, create meandering pathways and screen some areas so that parts of the garden cannot be seen at once. This creates more interest and a sense of adventure in the garden, which kids love.

acacia Wattle

Most are hardy and fast growing and deserve a space in every garden, making a quick screen while slower growing plants establish themselves. Many are nitrogen fixing and grow well with eucalypts.

		h x w
●	<i>acinacea</i> 'Gold Dust Wattle.' Gold balls. Sp	2mx2m
○ ●	<i>baileyana</i> 'Cootamundra' Large sprays golden fl. W	6mx4m

-----------------	-------------------------------------	--	-------

billardia

● <i>scandens</i>	'Apple Berry' Green bells Sp Green berries IND		Climber
-------------------	---	--	---------

boronia

Some are highly prized for their perfume, while other Boronias are long flowering. They require partial sun with moist but well drained soil and *no root disturbance*. A regular tip prune prolongs life and creates more flowers for the following year. Mulching provides protection for the surface root system and stops the plants from drying quickly.

	<i>anemonifolia</i>	Superb white star flower Su	1mx1m
○	<i>denticulata</i>	Easily grown sun/shade. Pink star flowers Su	1mx1m
●	<i>heterophylla</i>	Perfumed magenta bells. Su	1mx1m

eucalyptus Gum Tree

Due to their great diversity in size, foliage type and flowers, this species is a must to complete even the smallest garden. Most species are adaptable but the smaller Mallee type gums require warm, well drained aspects. All listed have cream flowers unless otherwise stated. Bloodwood species are now classified as *corymbia*.

Handy hint: Consider adding a rustic seat or log, allowing you to sit and enjoy the tranquillity and splendour of your surroundings.

kunzea (bird attractor) h x w

- *ambigua* White flowers Sp 2mx2m
- *ambigua* White flowers Sp Prostrate
- ● *baxteri* Brilliant scarlet/gold brushes. 2mx2m
- *ericoides* Burgundy foliage. Masses of white fl. Su 3mx2m

lagunaria (syn fugosa)

- ● *patersoni* Large pink fl. Shapely pyramid tree. 7mx4m

lechenaultia

- biloba* Brilliant blue flowers. W Sp Tip prune, plant in warm, well drained soil. 0.2m
- formosa* Red flowers for long periods. Prostrate

leptospermum Tea-Tree (bird attractor)

Adaptable plants tolerating wet/dry soils. Most are Spring flowering and the seed pods attract parrots and rosellas.

- 'Burgundy Queen' Pink flowers, burgundy foliage. 2mx1.5m
- *flavescens* 'Caldwell' Superb weeping soft green fol. White flowers Sp 1mx1m
- 'Copper Glow' Ideal fence screening. White flowers. 3mx2m
- 'Copper Sheen' Burgundy fol. Large white flowers. 0.5mx1.5m
- ● *horizontalis* Low, wide-spreading weeping. White flowers Su 0.5mx1m
- *lanigerum* Soft weeping grey foliage. IND 4mx3m
- 'Lavender Queen' Large lavender flowers Sp 1mx1m
- ● *lavigatum* 'Coastal Tea-Tree.' Hardy dry tolerant. White flowers Sp 4mx3m
- 'Little Buns' Excl. hybrid. Neat border or rockery plant. White fl. W Sp 0.5mx1m
- *petersonii* 'Lemon Scented' Bronze tips, white flowers. 4mx3m
- 'Pink Cascade' Long flowering in pink. Tip prune. 1mx1.5m
- rotundifolium* See 'Lavender Queen'
- scoparium nanum* Burgundy foliage, red fl. W Sp Needs some moisture. 0.3m
- 'Silver Fantasy' Lovely silvery foliage, weeping habit. Pink flowers W Sp 2mx1.5m

Handy hint: Mulch under thick plantings. This will reduce the area where leaves can drop on the lawn and also minimise the need for weeding.

leucophyta Salt Bush (syn calocephalus) h x w

- ● *brownii* Rounded silver fol. Drought lime and salt tol. Sunny spot. IND 0.7m
- ● *parviflorus* Lime and salt tol. Sunny spot. IND 0.7m

lomandra

- confertifolia* Ideal for borders, rockeries. Cream fl. Sun or semi shade. Tufting plant. 0.3m
- ● *longifolia* As above. IND 1mx1m

lophostemon

- confertus* 'Queensland Box' Majestic thick tree with glossy foliage. Cream flowers. 8mx4m

melaleuca Paper Bark h x w

Most melaleucas can withstand wet to dry soils once established and make excellent windbreaks. Most have bottlebrush type flowers and papery bark.

- ● *armillaris* Fine cream brushes. Bushy. Fast growing windbreak. 4mx4m
- ● *armillaris dwarf* Tough rounded shrub. Best for sunny spots 1mx1m
- bracteata* 'Green Form' Good hybrid, bright green foliage. White flowers. 5mx3m
- ● *diosmifolia* Lime green brushes, excellent specimen for an exposed site. 2mx2m
- ● *ericifolia* Papery bark, white flowers. IND 5mx3m
- 'Golden Gem' Beautiful rockery subject. Golden fol. Yellow. 1mx1m
- ● *hypericifolia* Salmon flowers most of the year. 2mx2m
- ● *hypericifolia dwarf* Dwarf form. Ideal rockery plant. 0.5mx3m
- ● *incana* Lovely green weeping foliage. Yellow brushes Su 2mx1.5
- ● *incana dwarf* Compact shrub. Grey weeping habit. 1mx1.5
- ● *lanceolata* 'Moonah' Long lived. Tolerant of dry conditions. White brushes. IND 5mx4m
- *laterita* Bright orange brushes Su 3mx2m
- ● *linarifolia* 'Snow in Summer.' Masses of white flowers Su 6mx4m
- ● *nesophilla* Pink pom poms Su 4mx3m
- ● *nesophilla dwarf* As above. Dwarf form. 1.5mx1.5m
- ● *squarrossa* Scented yellow brushes. IND 5mx4m
- ● *styphelioides* Pyramid shaped handsome tree. Cream flowers Sp 5mx4m
- ● *squamea* Masses of pink flowers Sp Needs some moisture. 3mx3m
- ● *thymifolia* Mauve brushes Sp/Su 1mx1m
- ● 'Velvet Cushion' Superb silvery fol. Excel. Rockery plant. 1mx1m

Handy hint: Use tall plants at the back, if in a boarder, or centre if in an island plantation with plants reducing in size towards the edges. Use of ground covers and small shrubs will relate tall and medium shrubs to ground level and reduce the need for weeding.

myoporum

- *floribundum* Unique pendulous fol. Masses of white fl. Su Tip prune yearly. Semi shade. 2mx3m

- longifolia syn linifolia* Masses of mauve flowers Sun or shade. W Sp 2mx1.5m
- ● *rosmarinifolia* White flowering form. 2mx2m
- ● *rosmarinifolia variegata* Compact shrub. White or lilac flowers and variegated foliage. 2mx2m
- ● 'Wynyabbie Gem' Masses of lilac flowers most of the year. Sun to light shade. Tip prune for more flowers Sp 2mx1.5m

Handy hint: Create a screen with shrubs instead of a fence. The result will help combat noise while providing a more spacious appearance and will visually enhance your property.

xanthorrhoea Grass Tree

- australis resinosa* Occasionally available. Slow growth but superb fol. Ideal for tubs near pools. 1-2m

zieria

- cytisoides* Pretty, grey foliage, pink flowers. Good drainage. Sun/shade. 1mx1m

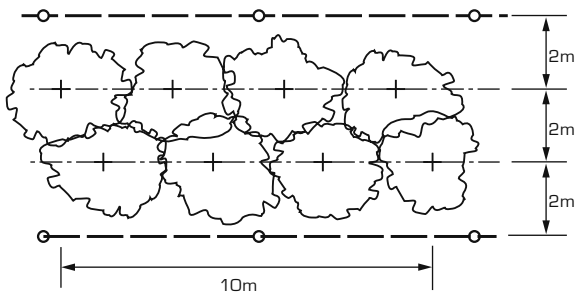

FERNS

A selection of tree ferns are available from our fernery building. All tree ferns supplied are registered to ensure sustainable collection and compliance with government regulations.

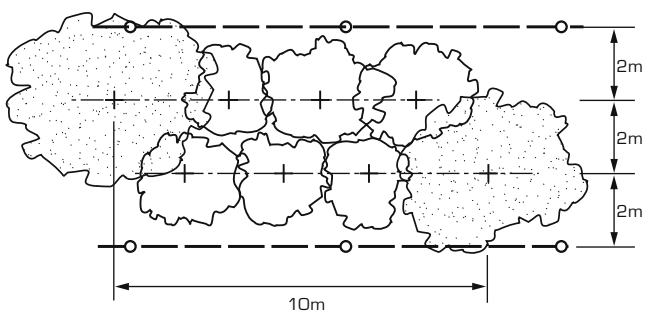

SUGGESTED WINDBREAK DESIGNS

Illustrated below are a number of windbreak options using both two and three row planting. An effective, attractive windbreak is an asset to any property to minimise soil erosion and provides habitat for birds and animals.

a. Two row shrub windbreak

b. Two row shrub and tree windbreak

c. Three row design using 3/4 shrubs, 1/4 trees
